

Survey Engine Final in PHP, Javascript, HTML, CSS.

Created by: Eduardo Murillo

Project for 23SPR-CIS-17B-48004.

Admin email: ADMIN22

Admin name: ADMIN

Admin password: Password1234

How to start: Load the Survey engine code into your local netbeans and load in also into MYSQL the included database to store the data from the users their email, name, password, their answers, questions and answers.

How to use the store: Login into the page with a provided link the admin of the page will provide by the admin ("for test purpose use this link http://localhost/Survey_engine/index.php?index=5 ").

Admin: for the admin actions you will be able to view orders, delete them, view items that are in the store, add items, and view user info.

All the code was mainly written in php due to the fact that all the data is stored in the database such as the images, the names of items, and prices.

All if these are stored on the database with formatting the helps me pick it apparent to do more functions on it, i used 3 different tables in the database the user db that storers there info, the items db that stores all the items in there formats, and the a orders table that stores all the data of the orders.

Admin operations:

The admin will be able to (E = Edit) (D = Delete) (V = View Survey) (A = Add Questions) (ANS = View Answers)
